

Universal metallic joint closure XOK

Prysmian Part Numbers: See page 3

The XOK universal joint closures are designed to provide water and pressure tight environmental protection for optical fibres and optical fibre splices regardless of the cable design. Application ranges from aerial, duct to buried installations. The closure has anchoring points for strength members and facilities for earthing of metallic elements. The splice organizer trays offer holders for heat shrink splice protectors and sufficient space for storage of spare fibres. The closure is easily assembled and re-entered.

The closure is available in two sizes: XOK 103 series up to 192 splices and XOK 107 series up to 336 splices. By using extension collars and or splice trays for fibre ribbons the splicing capacity can be increased up to 1000 splices.

The closure is available in seven basic configurations with two, three or four cable entrances. XOK A3/A4 branch joint closures and extension collars for more cable outlets are also available. Closures can be delivered as complete installation packages up to 192 fibres.
