

EZ Grip Barrier Attachment System

The patent-pending EZ Grip barricade clamp can be used with new barricades or attached to existing barricades. It is quick and easy to use. Simply squeeze the handle to attach and push the button to release.

(It is mandated by Arbitration Settlement between the IUEC and its member companies that all safety barricades used with escalators and moving walks must be physically attached to the balustrade.

Please refer to the Elevator Industry Field Employees Safety Handbook for more information.)

Current attachment methods such as suction cups are cumbersome and are often not used at all. As a result, they are not in compliance with the mandated safety policy and expose the public to possible injury.

Don't compromise on safety. Use the EZ Grip now.

EZ Grip Barrier Attachment System

Part Number	Description
EZ GRIP	Single EZ Grip barricade clamp
EZ GRIP KIT	Pair of EZ Grip barricade clamps
